In preparing the XBRL file for financial statements, preparers are required to convert non-financial and financial information within the signed and audited financial statements to relevant matching element labels within the Malaysian Business Reporting System (MBRS) Taxonomy, which has been created to reflect the latest reporting and disclosure requirements of the MFRS Accounting Standards (formerly known as Malaysian Financial Reporting Standards), the Malaysian Private Entity Reporting Standards (MPERS) and Companies Act 2016.

The onus is on each company's directors to submit their annual financial statements digitally to Suruhanjaya Syarikat Malaysia (SSM) through the MBRS portal (mPortal). This puts the pressure on companies to invest in engaging qualified talents to convert their signed and audited financial statements into XBRL format accurately, reflecting all requirements by SSM.
